

HHM Wellness Solutions, LLC

What is SpectraVision?

The SpectraVision™ does not diagnose, treat or cure disease.

SpectraVision™, is a non-invasive bio-balancing device that “reads” your body’s electrical responses, and reveals the sources of imbalances. Things like parasites, mold, fungus, antibiotics, bacteria, viruses, chemicals, and even how we think, can end up disrupting our energy flow and balance, and don’t allow our bodies to function properly. With the use of the technology, the practitioner’s guidance, supportive information and supplementation, and cold laser therapy, the client can claim greater self-awareness and responsibility for the necessary changes in habits and lifestyle,.

Some of the goals by making use of this technology and supporting products, include:

Increased energy flow in the bioelectrical and biomagnetic pathways of the body, activate and strengthen detoxification processes, reduce inflammatory responses, bolster immune function, activate tissue stimulation and repair, improve the body’s ability to deal with environmental stressors, and increase the body’s energy for optimal daily performance.

Who is not eligible for a SpectraVision scan?

Persons who have any of the following conditions: Pregnant, Pacemaker or heart arrhythmia, Organ Transplant, taking immunosuppressive drugs, seizures or history of seizures, shunts (this includes glucose monitor with transmitter), or if ever struck by lightning. If a body’s energy is TOO low, a scan cannot be performed.

At this time, no consultation will be done with anyone who has a cancer diagnosis and is actively in a treatment plan Liability release reflecting eligibility statements will be required.

How much does a session cost?

An initial wellness appointment is required in order to receive any additional services.

Initial appointment: 2 - 2.5 hours \$175 Follow up appointment: 1.5 hours \$145

With Initial and Follow up appointments, clients receive TWO supplements

Child follow up (12 years and under) \$95 Laser treatment: 15-30 minutes \$50

Supplement balancing: (up to 15 of client’s products) 15-30 minutes \$50

Emotional CPR - \$125

Laser treatment and client’s product balancing is included in initial and follow up appointments

Plan to spend an additional minimum of \$50 on supportive bio-identical supplementation at initial & follow-up appointments. We don’t want to overdo things, but want to achieve the best balance.

No insurance is accepted - cash, check, or Zelle payments only

What to Expect in a Session?

The practitioner does not diagnose, treat or cure disease.

1. General Health Consultation (Initial session)

2. Non-cognitive biofeedback scan.

The SpectraVision is a machine that reads your body's electrical responses to stimulus that can't be felt. I.e. - it doesn't hurt! You hold a device in the hand and sit still. The technology simply asks subconscious questions to your unique physiology. Your body's answers reveal its stress patterns and emotional challenges, and how to make corrections in your health. The client and practitioner then go over the scan by discovering clues of the imbalances presented on the report.

3. Acu-point testing:

By way of Galvanic Skin Response - Using a testing instrument which makes an indent in the skin (much like pressing a closed ball point pen to make an indent), further assessment is given as to the body's imbalances.

4. Product selection, testing, and imprinting:

Based on scan and acu-point results, a preparation and/or selection of Homeopathic/New Human's Multidimensional product supplementation, practitioner's product suggestions, along with up to TEN of the client's personal supplementation products, will be evaluated for balance by use of SpectraVision™ technology, to bring the client's system into sustainable equilibrium. You can bring in up to 10 of your personal supplements to check for balance.

*Plan to spend a minimum of \$50 on supportive bio-identical supplementation to take the first step on your journey to wellness

5. LLLT - Low Level Laser

All of the results from the appointment are used in auriculotherapy, using a LLLT.

Auriculotherapy is a mapping tool, much like the practices of iridology or reflexology, using the ear as a reflection of the entire body.

A quick session of LLLT is optional to the client at no charge, to boost the body's balance.

6. Point of Action:

Discussion to determine sustainable wellness solutions:

Ultimately, each scan and treatment session aids the body to achieve wellness on a progressively deeper level, and helps the client to understand his or her physical, mental, and emotional patterns, which may hinder the expression of total wellness.

-Best results occur when client has three successive sessions, 21-30 days apart, so that a sequence of support, detoxification, and restoration can be achieved.

It is VERY important to follow these instructions on the day of the scan:

~Drink 12-16 ounces of water within 2 hours before testing

~Do not take usual supplements for 24 hours before scan

~Do not eat 2 hours before scan

~DO continue with any prescription medication

~No alcohol or caffeine within 12 hours before AND after testing

~Wear two-piece outfit (or shirt/dress that can be unbuttoned to access abdomen by the client)

~No jewelry or belts during scan

~No underwire bras
